skin brightening and ingrown treatment kit

professional treatment protocol

professional use only

Please read all instructions and precautions before beginning treatment.

ABOUT THE TREATMENT

The KAZ PRO Brightening Treatment utilizes Alpha Hydroxy Acids (AHAs) and Beta Hydroxy Acids (BHAs) to help reduce hyperpigmentation, prevent ingrown hairs, minimize breakouts, and promote smoother, brighter-looking skin on the entire body.

Benefits

brightens
skin

helps reduce
hyperpigmentation

prevents
ingrown hairs

minimizes
breakouts

PRODUCTS INCLUDED IN THE KIT

- 1 Brightening Peeling Pads
- 2 Clarifying Peel
- 3 Clarifying Peel Intense
- 4 The Balm

Optional product

Bi-Phase Micellar Cleanser

PROFESSIONAL TREATMENT PROTOCOL

TIP

Consistency matters more than intensity. Gentle, regular treatments provide safer and more effective long-term results than aggressive exfoliation routines.

Recommended treatment schedule

For optimal results, perform **4–6 professional treatments every 2 weeks**, followed by **monthly maintenance treatments** and a consistent home-care routine to help maintain clear, smooth, healthy-looking skin.

PRECAUTIONS

Patch test

Before the first treatment, perform a patch test 24–48 hours prior to full application, especially if the client has never used products containing Alpha Hydroxy Acids or Beta Hydroxy Acids.

Do not use if:

- You are allergic to salicylates (aspirin allergy).
- You have active eczema, dermatitis, inflammation, or open wounds in the treatment area.
- Your skin barrier is severely compromised.
- You are sunburned.
- You are currently using retinoids or have used isotretinoin within the last 6 months.

Consult a physician before use if:

- You are pregnant or breastfeeding.
- You are taking medications that increase photosensitivity.
- You have a history of severe skin sensitivity or post-inflammatory hyperpigmentation.

Use extra caution if:

- You have sensitive skin.
- You are using retinoids (tretinoin, adapalene, or tazarotene).
- You are using other exfoliating acids.
- You are prone to post-inflammatory hyperpigmentation.

Discontinue use and seek medical advice if:

- Severe burning develops.
- Blistering occurs.
- Significant swelling develops.
- Persistent redness lasts more than several days.
- Signs of infection appear.

FIRST TREATMENT

- 1 Cleanse the area with Bi-Phase Micellar Cleanser and prepare the skin with Brightening Peeling Pads.
- 2 Apply a thin layer of Clarifying Peel.
- 3 Leave on for 3-5 minutes, depending on the skin type and treatment area.
- 4 Rinse thoroughly with cool water. Remove immediately and neutralize with KAZ PRO Micellar Cleanser if excessive burning occurs. Mild tingling is normal.
- 5 Apply a thin layer of KAZ PRO Balm.

ADJUSTING THE PROTOCOL

Evaluate the skin's response after each treatment and gradually increase the contact time as tolerated. If additional exfoliation is desired and no adverse reactions occurred after the first treatment, progress to Clarifying Peel Intense.

For enhanced exfoliation, a physical preparation step may be performed using the **KAZ PRO Exfoliating Mini Glove** and **KAZ PRO Oil**. Completely remove all oil residue before applying the peel.

Clients with very sensitive skin may continue using **Clarifying Peel** throughout the treatment series instead of progressing to **Clarifying Peel Intense**.

SECOND THROUGH SIXTH EVERY TWO WEEKS TREATMENTS

- 1 Cleanse the area with KAZ PRO Bi-Phase Micellar Cleanser and prepare the skin with Brightening Peeling Pads.
- 2 Apply a thin layer of Clarifying Peel Intense.
- 3 Leave on for 5-8 minutes, depending on the skin type and treatment area.
- 4 Rinse thoroughly with cool water. Remove and neutralize with KAZ PRO Micellar Cleanser immediately if excessive burning occurs. Mild tingling is normal.
- 5 Apply a thin layer of KAZ PRO Balm.

AFTER-WAX BRIGHTENING PROTOCOL

The degree of post-wax sensitivity depends on the waxing procedure and the type of wax used. Soft waxes and natural resin hard waxes tend to exfoliate the skin more than synthetic hard waxes. Therefore, this protocol is recommended only after waxing performed with synthetic hard wax.

Before proceeding, carefully assess the skin for redness and irritation. If the skin is not significantly irritated, perform the following gentle brightening treatment:

- 1 Cleanse the area with KAZ PRO Bi-Phase Micellar Cleanser and prepare the skin with Brightening Peeling Pads.
- 2 Apply a thin layer of Clarifying Peel. **DO NOT USE CLARIFYING PEEL INTENSE AFTER WAXING.**

- 3 Leave on for 1-2 minutes.
- 4 Rinse thoroughly with cool water.
Remove and neutralize with KAZ PRO Micellar Cleanser immediately if excessive burning occurs. Mild tingling is normal.
- 5 Apply a thin layer of KAZ PRO Balm.

TIP

After waxing the Kaz Clarifying peel peel may be applied as a spot treatment to help prevent and reduce the appearance of ingrown hair.

POST-TREATMENT CARE

- Avoid direct sun exposure and always apply SPF 30 or higher to exposed treated areas.
- Avoid hot baths, saunas, steam rooms, swimming pools, and excessive sweating for 24 hours.
- Do not use retinoids, scrubs, or other exfoliating products for 3–5 days after treatment.
- Keep the skin moisturized and avoid picking or scratching the treated area.
- Mild redness and flaking may occur and are a normal part of the renewal process.
- Consistent home care is essential for maintaining results and minimizing ingrown hairs.

RECOMMENDED PRODUCTS FOR HOME CARE:

Kaz Intimate Hair and Skin Oil 1 fl oz / 30 ml

Kaz Exfoliating Mini Glove 4 pack

Kaz The Balm 50 ml / 1.69 fl.oz

Kaz Ingrown Hair Exfoliating Sugar Scrub Bare (Fragrance Free) 8 fl oz / 236 ml

Thank you for choosing
KAZ PRO!

Professional results start with consistency.
